Package 'naniar'

May 14, 2021

Type Package

Title Data Structures, Summaries, and Visualisations for Missing Data

Version 0.6.1

Description Missing values are ubiquitous in data and need to be explored and handled in the initial stages of analysis. 'naniar' provides data structures and functions that facilitate the plotting of missing values and examination of imputations. This allows missing data dependencies to be explored with minimal deviation from the common work patterns of 'ggplot2' and tidy data. The work is fully discussed at Tierney & Cook (2018) <arXiv:1809.02264>.

add_any_miss 5

Description

This adds a column named "any_miss" (by default) that describes whether there are any missings in all of the variables (default), or whether any of the specified columns, specified using variables names or dplyr verbs, starts_with, contains, ends_with, etc. By default the added column will be called "any_miss_all", if no variables are specified, otherwise, if variables are specified, the label will be "any_miss_vars" to indicate that not all variables have been used to create the labels.

Usage

```
add_any_miss(
  data,
  ...,
  label = "any_miss",
  missing = "missing",
  complete = "complete"
)
```

Arguments

data	data.frame
•••	Variable names to use instead of the whole dataset. By default this looks at the whole dataset. Otherwise, this is one or more unquoted expressions separated by commas. These also respect the dplyr verbs starts_with, contains, ends_with, etc. By default will add "_all" to the label if left blank, otherwise will add "_vars" to distinguish that it has not been used on all of the variables.
label	label for the column, defaults to "any_miss". By default if no additional variables are listed the label col is "any_miss_all", otherwise it is "any_miss_vars", if variables are specified.
missing	character a label for when values are missing - defaults to "missing"
complete	character character a label for when values are complete - defaults to "complete"

Details

By default the prefix "any_miss" is used, but this can be changed in the label argument.

Value

data.frame with data and the column labelling whether that row (for those variables) has any missing values - indicated by "missing" and "complete".

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

6 add_label_missings

Examples

```
airquality %>% add_any_miss()
airquality %>% add_any_miss(Ozone, Solar.R)
```

add_label_missings

Add a column describing if there are any missings in the dataset

Description

Add a column describing if there are any missings in the dataset

Usage

```
add_label_missings(data, ..., missing = "Missing", complete = "Not Missing")
```

Arguments

data data.frame

... extra variable to label

missing character a label for when values are missing - defaults to "Missing"

complete character character a label for when values are complete - defaults to "Not Miss-

ing"

Value

data.frame with a column "any_missing" that is either "Not Missing" or "Missing" for the purposes of plotting / exploration / nice print methods

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

```
airquality %>% add_label_missings()
airquality %>% add_label_missings(Ozone, Solar.R)
airquality %>% add_label_missings(Ozone, Solar.R, missing = "yes", complete = "no")
```

add_label_shadow 7

add_label_shadow	Add a column describing whether there is a shadow
ddd_idbci_Silddow	That a commit acceptant whether there is a shadow

Description

Instead of focussing on labelling whether there are missings, we instead focus on whether there have been any shadows created. This can be useful when data has been imputed and you need to determine which rows contained missing values when the shadow was bound to the dataset.

Usage

```
add_label_shadow(data, ..., missing = "Missing", complete = "Not Missing")
```

Arguments

data	data.frame
	extra variable to label
missing	character a label for when values are missing - defaults to "Missing"
complete	character character a label for when values are complete - defaults to "Not Missing"

Value

data.frame with a column, "any_missing", which describes whether or not there are any rows that have a shadow value.

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

```
airquality %>%
  add_shadow(Ozone, Solar.R) %>%
  add_label_shadow()
```

8 add_n_miss

add_miss_cluster	Add a column that tells us which "missingness cluster" a row belongs to
------------------	---

Description

A way to extract the cluster of missingness that a group belongs to. For example, if you use vis_miss(airquality,cluster = TRUE), you can see some clustering in the data, but you do not have a way to identify the cluster. Future work will incorporate the seriation package to allow for better control over the clustering from the user.

Usage

```
add_miss_cluster(data, cluster_method = "mcquitty", n_clusters = 2)
```

Arguments

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

Examples

```
add_miss_cluster(airquality)
add_miss_cluster(airquality, n_clusters = 3)
add_miss_cluster(airquality, cluster_method = "ward.D", n_clusters = 3)
```

add_n_miss

Add column containing number of missing data values

Description

It can be useful when doing data analysis to add the number of missing data points into your dataframe. add_n_miss adds a column named "n_miss", which contains the number of missing values in that row.

add_prop_miss 9

Usage

```
add_n_miss(data, ..., label = "n_miss")
```

Arguments

data a dataframe

... Variable names to use instead of the whole dataset. By default this looks at

the whole dataset. Otherwise, this is one or more unquoted expressions separated by commas. These also respect the dplyr verbs starts_with, contains, ends_with, etc. By default will add "_all" to the label if left blank, otherwise will add "_vars" to distinguish that it has not been used on all of the variables.

label character default is "n_miss".

Value

a dataframe

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_prop_miss() add_shadow_shift() cast_shadow()
```

Examples

```
airquality %>% add_n_miss()
airquality %>% add_n_miss(Ozone, Solar.R)
airquality %>% add_n_miss(dplyr::contains("o"))
```

add_prop_miss

Add column containing proportion of missing data values

Description

It can be useful when doing data analysis to add the proportion of missing data values into your dataframe. add_prop_miss adds a column named "prop_miss", which contains the proportion of missing values in that row. You can specify the variables that you would like to show the missingness for.

Usage

```
add_prop_miss(data, ..., label = "prop_miss")
```

10 add_shadow

Arguments

data a dataframe

... Variable names to use instead of the whole dataset. By default this looks at

the whole dataset. Otherwise, this is one or more unquoted expressions separated by commas. These also respect the dplyr verbs starts_with, contains, ends_with, etc. By default will add "_all" to the label if left blank, otherwise will add "_vars" to distinguish that it has not been used on all of the variables.

label character string of what you need to name variable

Value

a dataframe

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_prop_miss() add_shadow_shift() cast_shadow()
```

Examples

```
airquality %>% add_prop_miss()
airquality %>% add_prop_miss(Solar.R, Ozone)
airquality %>% add_prop_miss(Solar.R, Ozone, label = "testing")

# this can be applied to model the proportion of missing data
# as in Tierney et al (doi: 10.1136/bmjopen-2014-007450)
# see "Modelling missingness" in vignette "Getting Started with naniar"
# for details
```

add_shadow

Add a shadow column to dataframe

Description

As an alternative to bind_shadow(), you can add specific individual shadow columns to a dataset. These also respect the dplyr verbs starts_with, contains, ends_with, etc.

Usage

```
add_shadow(data, ...)
```

Arguments

data data.frame

... One or more unquoted variable names, separated by commas. These also respect

the dplyr verbs starts_with, contains, ends_with, etc.

add_shadow_shift 11

Value

data.frame

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

Examples

```
airquality %>% add_shadow(Ozone)
airquality %>% add_shadow(Ozone, Solar.R)
```

add_shadow_shift

Add a shadow shifted column to a dataset

Description

Shadow shift missing values using only the selected variables in a dataset, by specifying variable names or use dplyr vars and dplyr verbs starts_with, contains, ends_with, etc.

Usage

```
add_shadow_shift(data, ..., suffix = "shift")
```

Arguments

data data.frame

... One or more unquoted variable names separated by commas. These also respect

the dplyr verbs starts_with, contains, ends_with, etc.

suffix suffix to add to variable, defaults to "shift"

Value

data with the added variable shifted named as var_suffix

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

```
airquality %>% add_shadow_shift(Ozone, Solar.R)
```

12 all-is-miss-complete

add_span_counter

Add a counter variable for a span of dataframe

Description

Adds a variable, span_counter to a dataframe. Used internally to facilitate counting of missing values over a given span.

Usage

```
add_span_counter(data, span_size)
```

Arguments

data data.frame span_size integer

Value

data.frame with extra variable "span_counter".

Examples

```
## Not run:
# add_span_counter(pedestrian, span_size = 100)
## End(Not run)
```

Description

```
This is shorthand for all(is.na(x)) and all(!is.na(x))
```

Usage

```
all_na(x)
all_miss(x)
all_complete(x)
```

Arguments

x an R object to be tested.

any-na 13

Examples

```
misses <- c(NA, NA, NA)
complete <- c(1, 2, 3)
mixture <- c(NA, 1, NA)

all_na(misses)
all_na(complete)
all_na(mixture)
all_complete(misses)
all_complete(complete)
all_complete(complete)
all_complete(mixture)</pre>
```

any-na

Identify if there are any missing or complete values

Description

It is useful to search for any instances of missing or complete values. There Are two functions that do this in naniar - any_miss and it's alias any_na. These bother under the hood call anyNA. any_complete is the complement to any_miss - it returns TRUE if there are any complete values.

Usage

```
any_na(x)
any_miss(x)
any_complete(x)
```

Arguments

Χ

an R object to be tested

See Also

```
all_miss() all_complete
```

```
anyNA(airquality)
any_na(airquality)
any_miss(airquality)
any_complete(airquality)
```

14 as_shadow

any_row_miss

Helper function to determine whether there are any missings

Description

Helper function to determine whether there are any missings

Usage

```
any_row_miss(x)
```

Arguments

Χ

a vector

Value

logical vector TRUE = missing FALSE = complete

as_shadow

Create shadows

Description

Return a tibble in shadow matrix form, where the variables are the same but have a suffix _NA attached to distinguish them.

Usage

```
as_shadow(data, ...)
```

Arguments

data dataframe

... selected variables to use

Details

Representing missing data structure is achieved using the shadow matrix, introduced in Swayne and Buja. The shadow matrix is the same dimension as the data, and consists of binary indicators of missingness of data values, where missing is represented as "NA", and not missing is represented as "!NA". Although these may be represented as 1 and 0, respectively.

Value

appended shadow with column names

as_shadow_upset 15

Examples

```
as_shadow(airquality)
```

as_shadow_upset

Convert data into shadow format for doing an upset plot

Description

Upset plots are a way of visualising common sets, this function transforms the data into a format that feeds directly into an upset plot

Usage

```
as_shadow_upset(data)
```

Arguments

data

a data.frame

Value

a data.frame

```
## Not run:
library(UpSetR)
airquality %>%
   as_shadow_upset() %>%
   upset()
## End(Not run)
```

16 bind_shadow

bind_shadow

Bind a shadow dataframe to original data

Description

Binding a shadow matrix to a regular dataframe helps visualise and work with missing data.

Usage

```
bind_shadow(data, only_miss = FALSE, ...)
```

Arguments

data a dataframe

only_miss logical - if FALSE (default) it will bind a dataframe with all of the variables

duplicated with their shadow. Setting this to TRUE will bind variables only those variables that contain missing values. See the examples for more details.

... extra options to pass to recode_shadow() - a work in progress.

Value

data with the added variable shifted and the suffix _NA

cast_shadow 17

cast_shadow

Add a shadow column to a dataset

Description

Casting a shadow shifted column performs the equivalent pattern to data %>% select(var) %>% shadow_shift(). This is a convenience function that makes it easy to perform certain visualisations, in line with the principle that the user should have a way to flexibly return data formats containing information about the missing data. It forms the base building block for the functions cast_shadow_shift, and cast_shadow_shift_label. It also respects the dplyr verbs starts_with, contains, ends_with, etc. to select variables.

Usage

```
cast_shadow(data, ...)
```

Arguments

data data.frame

One or more unquoted variable names separated by commas. These respect the dplyr verbs starts_with, contains, ends_with, etc.

Value

data with the added variable shifted and the suffix _NA

See Also

```
cast_shadow_shift(), cast_shadow_shift_label() bind_shadow() add_any_miss() add_label_missings()
add_label_shadow() add_miss_cluster() add_prop_miss() add_shadow_shift()
```

cast_shadow_shift

Add a shadow and a shadow_shift column to a dataset

Description

Shift the values and add a shadow column. It also respects the dplyr verbs starts_with, contains, ends_with, etc.

Usage

```
cast_shadow_shift(data, ...)
```

Arguments

data data.frame

One or more unquoted variable names separated by commas. These respect the dplyr verbs starts_with, contains, ends_with, etc.

Value

data.frame with the shadow and shadow_shift vars

See Also

```
cast_shadow_shift(), cast_shadow_shift_label() bind_shadow() add_any_miss() add_label_missings()
add_label_shadow() add_miss_cluster() add_prop_miss() add_shadow_shift()
```

Examples

```
airquality %>% cast_shadow_shift(Ozone,Temp)
airquality %>% cast_shadow_shift(dplyr::contains("o"))
```

```
cast_shadow_shift_label
```

Add a shadow column and a shadow shifted column to a dataset

Description

Shift the values, add shadow, add missing label

Usage

```
cast_shadow_shift_label(data, ...)
```

common_na_numbers 19

Arguments

data.frame
... One or more unquoted expressions separated by commas. These also respect the dplyr verbs "starts_with", "contains", "ends_with", etc.

Value

data.frame with the shadow and shadow_shift vars, and missing labels

See Also

```
cast_shadow_shift(), cast_shadow_shift_label() bind_shadow() add_any_miss() add_label_missings()
add_label_shadow() add_miss_cluster() add_prop_miss() add_shadow_shift()
```

Examples

common_na_numbers

Common number values for NA

Description

This vector contains common number values of NA (missing), which is aimed to be used inside naniar functions miss_scan_count() and replace_with_na(). The current list of numbers can be found by printing out common_na_numbers. It is a useful way to explore your data for possible missings, but I strongly warn against using this to replace NA values without very carefully looking at the incidence for each of the cases. Common NA strings are in the data object common_na_strings.

Usage

```
common_na_numbers
```

20 common_na_strings

Format

An object of class numeric of length 8.

Note

```
original discussion here https://github.com/njtierney/naniar/issues/168
```

Examples

```
dat_ms <- tibble::tribble(~x, ~y,</pre>
                          1,
                               "A",
                                      -100,
                               "N/A", -99,
                          3,
                          NA, NA,
                                      -98,
                          -99, "E",
                                     -101,
                                     -1)
                          -98, "F",
miss_scan_count(dat_ms, -99)
miss_scan_count(dat_ms, c("-99","-98","N/A"))
common_na_numbers
miss_scan_count(dat_ms, common_na_numbers)
```

common_na_strings

Common string values for NA

Description

This vector contains common values of NA (missing), which is aimed to be used inside naniar functions miss_scan_count() and replace_with_na(). The current list of strings used can be found by printing out common_na_strings. It is a useful way to explore your data for possible missings, but I strongly warn against using this to replace NA values without very carefully looking at the incidence for each of the cases. Please note that common_na_strings uses \\ around the "?", "." and "*" characters to protect against using their wildcard features in grep. Common NA numbers are in the data object common_na_numbers.

Usage

```
common_na_strings
```

Format

An object of class character of length 25.

Note

```
original discussion here https://github.com/njtierney/naniar/issues/168
```

gather_shadow 21

Examples

```
dat_ms <- tibble::tribble(~x, ~y,</pre>
                               "A",
                                      -100,
                          1,
                              "N/A", -99,
                          3,
                          NA, NA,
                                      -98,
                          -99, "E",
                                     -101,
                          -98, "F",
                                     -1)
miss_scan_count(dat_ms, -99)
miss_scan_count(dat_ms, c("-99","-98","N/A"))
common_na_strings
miss_scan_count(dat_ms, common_na_strings)
```

gather_shadow

Long form representation of a shadow matrix

Description

gather_shadow is a long-form representation of binding the shadow matrix to your data, producing variables named case, variable, and missing, where missing contains the missing value representation.

Usage

```
gather_shadow(data)
```

Arguments

data

a dataframe

Value

dataframe in long, format, containing information about the missings

```
gather_shadow(airquality)
```

22 geom_miss_point

GeomMissPoint

naniar-ggproto

Description

These are the stat and geom overrides using ggproto from ggplot2 that make naniar work.

Usage

StatMissPoint

Format

An object of class StatMissPoint (inherits from Stat, ggproto, gg) of length 6.

geom_miss_point

geom_miss_point

Description

geom_miss_point provides a way to transform and plot missing values in ggplot2. To do so it uses methods from ggobi to display missing data points 10\ the same axis.

Usage

```
geom_miss_point(
  mapping = NULL,
  data = NULL,
  prop_below = 0.1,
  jitter = 0.05,
  stat = "miss_point",
  position = "identity",
  colour = ..missing..,
  na.rm = FALSE,
  show.legend = NA,
  inherit.aes = TRUE,
  ...
)
```

Arguments

mapping

Set of aesthetic mappings created by ggplot2::aes() or ggplot2::aes_(). If specified and inherit.aes = TRUE (the default), is combined with the default mapping at the top level of the plot. You only need to supply mapping if there isn't a mapping defined for the plot.

geom_miss_point 23

data	A data frame. If specified, overrides the default data frame defined at the top level of the plot.
prop_below	the degree to shift the values. The default is 0.1
jitter	the amount of jitter to add. The default is 0.05
stat	The statistical transformation to use on the data for this layer, as a string.
position	Position adjustment, either as a string, or the result of a call to a position adjustment function.
colour	the colour chosen for the aesthetic
na.rm	If FALSE (the default), removes missing values with a warning. If TRUE silently removes missing values.
show.legend	logical. Should this layer be included in the legends? NA, the default, includes if any aesthetics are mapped. FALSE never includes, and TRUE always includes.
inherit.aes	If FALSE, overrides the default aesthetics, rather than combining with them. This is most useful for helper functions that define both data and aesthetics and shouldn't inherit behaviour from the default plot specification, e.g. borders.
• • •	other arguments passed on to <code>ggplot2::layer()</code> . There are three types of arguments you can use here:
	 Aesthetics: to set an aesthetic to a fixed value, like color = "red" or size = 3.
	• Other arguments to the layer, for example you override the default stat associated with the layer.

• Other arguments passed on to the stat.

Details

Plot Missing Data Points

Note

Warning message if na.rm = T is supplied.

24 gg_miss_case

```
ggplot(airquality,
    aes(x = Ozone,
    y = Solar.R)) +
geom_miss_point()

# using facets

ggplot(airquality,
    aes(x = Ozone,
    y = Solar.R)) +
geom_miss_point() +
facet_wrap(~Month)

## End(Not run)
```

gg_miss_case

Plot the number of missings per case (row)

Description

This is a visual analogue to miss_case_summary. It draws a ggplot of the number of missings in each case (row). A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_case(x, facet, order_cases = TRUE, show_pct = FALSE)
```

Arguments

X	data.frame
facet	(optional) a single bare variable name, if you want to create a faceted plot.
order_cases	logical Order the rows by missingness (default is FALSE - no order).
show_pct	logical Show the percentage of cases

Value

a ggplot object depicting the number of missings in a given case.

See Also

```
geom_miss_point() gg_miss_case_cumsum gg_miss_fct() gg_miss_span() gg_miss_var()
gg_miss_var_cumsum() gg_miss_which()
```

gg_miss_case_cumsum 25

Examples

```
gg_miss_case(airquality)
## Not run:
library(ggplot2)
gg_miss_case(airquality) + labs(x = "Number of Cases")
gg_miss_case(airquality, show_pct = TRUE)
gg_miss_case(airquality, order_cases = FALSE)
gg_miss_case(airquality, facet = Month)
gg_miss_case(airquality, facet = Month, order_cases = FALSE)
gg_miss_case(airquality, facet = Month, show_pct = TRUE)
## End(Not run)
```

gg_miss_case_cumsum

Plot of cumulative sum of missing for cases

Description

A plot showing the cumulative sum of missing values for cases, reading the rows from the top to bottom. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_case_cumsum(x, breaks = 20)
```

Arguments

x a dataframe

breaks the breaks for the x axis default is 20

Value

a ggplot object depicting the number of missings

See Also

```
geom_miss_point() gg_miss_case() gg_miss_fct() gg_miss_span() gg_miss_var() gg_miss_var_cumsum()
gg_miss_which()
```

```
gg_miss_case_cumsum(airquality)
```

26 gg_miss_fct

gg_miss_fct

Plot the number of missings for each variable, broken down by a factor

Description

This function draws a ggplot plot of the number of missings in each column, broken down by a categorical variable from the dataset. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_fct(x, fct)
```

Arguments

x data.frame

fct column containing the factor variable to visualise

Value

ggplot object depicting the % missing of each factor level for each variable.

See Also

```
geom_miss_point() gg_miss_case() gg_miss_case_cumsum gg_miss_span() gg_miss_var()
gg_miss_var_cumsum() gg_miss_which()
```

```
gg_miss_fct(x = riskfactors, fct = marital)
## Not run:
library(ggplot2)
gg_miss_fct(x = riskfactors, fct = marital) + labs(title = "NA in Risk Factors and Marital status")
## End(Not run)
```

gg_miss_span 27

gg_miss_span	Plot the number of missings in a given repeating span

Description

gg_miss_span is a replacement function to imputeTS::plotNA.distributionBar(tsNH4, breaksize = 100), which shows the number of missings in a given span, or breaksize. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_span(data, var, span_every, facet)
```

Arguments

data data.frame

var a bare unquoted variable name from data.

span_every integer describing the length of the span to be explored

facet (optional) a single bare variable name, if you want to create a faceted plot.

Value

ggplot2 showing the number of missings in a span (window, or breaksize)

See Also

```
geom_miss_point() gg_miss_case() gg_miss_case_cumsum gg_miss_fct() gg_miss_var()
gg_miss_var_cumsum() gg_miss_which()
```

```
miss_var_span(pedestrian, hourly_counts, span_every = 3000)
## Not run:
library(ggplot2)
gg_miss_span(pedestrian, hourly_counts, span_every = 3000)
gg_miss_span(pedestrian, hourly_counts, span_every = 3000, facet = sensor_name)
# works with the rest of ggplot
gg_miss_span(pedestrian, hourly_counts, span_every = 3000) + labs(x = "custom")
gg_miss_span(pedestrian, hourly_counts, span_every = 3000) + theme_dark()
## End(Not run)
```

28 gg_miss_upset

gg_miss_upset

Plot the pattern of missingness using an upset plot.

Description

Upset plots are a way of visualising common sets, gg_miss_upset shows the number of missing values for each of the sets of data. The default option of gg_miss_upset is taken from UpSetR::upset - which is to use up to 5 sets and up to 40 interactions. We also set the ordering to by the frequency of the intersections. Setting nsets = 5 means to look at 5 variables and their combinations. The number of combinations or rather intersections is controlled by nintersects. If there are 40 intersections, there will be 40 combinations of variables explored. The number of sets and intersections can be changed by passing arguments nsets = 10 to look at 10 sets of variables, and nintersects = 50 to look at 50 intersections.

Usage

```
gg_miss_upset(data, order.by = "freq", ...)
```

Arguments

```
data data.frame

order.by (from UpSetR::upset) How the intersections in the matrix should be ordered by.

Options include frequency (entered as "freq"), degree, or both in any order. See
?UpSetR::upset for more options

... arguments to pass to upset plot - see ?UpSetR::upset
```

Value

a ggplot visualisation of missing data

```
## Not run:
gg_miss_upset(airquality)
gg_miss_upset(riskfactors)
gg_miss_upset(riskfactors, nsets = 10)
gg_miss_upset(riskfactors, nsets = 10, nintersects = 10)
## End(Not run)
```

gg_miss_var 29

gg_miss_var

Plot the number of missings for each variable

Description

This is a visual analogue to miss_var_summary. It draws a ggplot of the number of missings in each variable, ordered to show which variables have the most missing data. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_var(x, facet, show_pct = FALSE)
```

Arguments

x a dataframe

facet (optional) bare variable name, if you want to create a faceted plot.

show_pct logical shows the number of missings (default), but if set to TRUE, it will display

the proportion of missings.

Value

a ggplot object depicting the number of missings in a given column

See Also

```
geom_miss_point() gg_miss_case() gg_miss_case_cumsum gg_miss_fct() gg_miss_span()
gg_miss_var() gg_miss_var_cumsum() gg_miss_which()
```

```
gg_miss_var(airquality)
## Not run:
library(ggplot2)
gg_miss_var(airquality) + labs(y = "Look at all the missing ones")
gg_miss_var(airquality, Month)
gg_miss_var(airquality, Month, show_pct = TRUE)
gg_miss_var(airquality, Month, show_pct = TRUE) + ylim(0, 100)
## End(Not run)
```

30 gg_miss_which

gg_miss_var_cumsum

Plot of cumulative sum of missing value for each variable

Description

A plot showing the cumulative sum of missing values for each variable, reading columns from the left to the right of the initial dataframe. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_var_cumsum(x)
```

Arguments

Х

a data.frame

Value

a ggplot object showing the cumulative sum of missings over the variables

See Also

```
geom_miss_point() gg_miss_case() gg_miss_case_cumsum gg_miss_fct() gg_miss_span()
gg_miss_var() gg_miss_which()
```

Examples

```
gg_miss_var_cumsum(airquality)
```

gg_miss_which

Plot which variables contain a missing value

Description

This plot produces a set of rectangles indicating whether there is a missing element in a column or not. A default minimal theme is used, which can be customised as normal for ggplot.

Usage

```
gg_miss_which(x)
```

Arguments

Χ

a dataframe

group_by_fun 31

Value

a ggplot object of which variables contains missing values

See Also

```
geom_miss_point() gg_miss_case() gg_miss_case_cumsum gg_miss_fct() gg_miss_span()
gg_miss_var() gg_miss_var_cumsum() gg_miss_which()
```

Examples

```
gg_miss_which(airquality)
```

group_by_fun

Group By Helper

Description

This is a wrapper to facilitate the grouped_df S3 method.

Usage

```
group_by_fun(data, .fun, ...)
```

Arguments

data data.frame, which will be grouped.fun a function to apply... additional arguments to be passed to map

Value

a dataframe with the function applied to each group

```
## Not run:
miss_case_table.grouped_df <- function(data){
group_by_fun(data,.fun = miss_case_table)
}
airquality %>%
group_by(Month) %>%
miss_case_table()
## End(Not run)
```

32 impute_below_all

impute_below

Impute data with values shifted 10 percent below range.

Description

It can be useful in exploratory graphics to impute data outside the range of the data. impute_below imputes all variables with missings to have values 10 percent below the range for numeric values, and for character or factor values adds a new string or label. It is powered by shadow_shift, so please see the documentation for shadow_shift() to full details on the different implementations.

Usage

```
impute_below(...)
```

Arguments

... extra arguments to pass - see shadow_shift() for discussion on this.

impute_below_all

Impute data with values shifted 10 percent below range.

Description

It can be useful in exploratory graphics to impute data outside the range of the data. impute_below_all imputes all variables with missings to have values 10\ values adds a new string or label.

Usage

```
impute_below_all(.tbl, prop_below = 0.1, jitter = 0.05, ...)
```

Arguments

```
. tbl a data.frame
```

prop_below the degree to shift the values. default is jitter the amount of jitter to add. default is 0.05

... additional arguments

Value

an dataset with values imputed

impute_below_at 33

Examples

```
# you can impute data like so:
airquality %>%
 impute_below_all()
# However, this does not show you WHERE the missing values are.
# to keep track of them, you want to use `bind_shadow()` first.
airquality %>%
 bind_shadow() %>%
 impute_below_all()
# This identifies where the missing values are located, which means you
# can do things like this:
## Not run:
library(ggplot2)
airquality %>%
 bind_shadow() %>%
 impute_below_all() %>%
 # identify where there are missings across rows.
 add_label_shadow() %>%
 ggplot(aes(x = Ozone,
             y = Solar.R,
             colour = any_missing)) +
 geom_point()
# Note that this ^^ is a long version of `geom_miss_point()`.
## End(Not run)
```

impute_below_at

Scoped variants of impute_below

Description

impute_below operates on all variables. To only impute variables that satisfy a specific condition, use the scoped variants, impute_below_at, and impute_below_if. To use _at effectively, you must know that _at`` affects variables selected with a character vector, or with vars()'.

Usage

```
impute_below_at(.tbl, .vars, prop_below = 0.1, jitter = 0.05, ...)
```

Arguments

```
. tbl a data.frame
.vars variables to impute
```

impute_below_if

```
prop_below the degree to shift the values. default is jitter the amount of jitter to add. default is 0.05 extra arguments
```

Value

an dataset with values imputed

Examples

```
# select variables starting with a particular string.
impute_below_at(airquality,
                .vars = c("Ozone", "Solar.R"))
impute_below_at(airquality, .vars = 1:2)
## Not run:
library(dplyr)
impute_below_at(airquality,
                .vars = vars(0zone))
library(ggplot2)
airquality %>%
 bind_shadow() %>%
 impute_below_at(vars(Ozone, Solar.R)) %>%
 add_label_shadow() %>%
 ggplot(aes(x = Ozone,
             y = Solar.R,
             colour = any_missing)) +
         geom_point()
## End(Not run)
```

impute_below_if

Scoped variants of impute_below

Description

impute_below operates on all variables. To only impute variables that satisfy a specific condition, use the scoped variants, impute_below_at, and impute_below_if.

Usage

```
impute_below_if(.tbl, .predicate, prop_below = 0.1, jitter = 0.05, ...)
```

impute_mean 35

Arguments

.tbl data.frame
.predicate A predicate function (such as is.numeric)
prop_below the degree to shift the values. default is
jitter the amount of jitter to add. default is 0.05
... extra arguments

Value

an dataset with values imputed

Examples

```
airquality %>%
  impute_below_if(.predicate = is.numeric)
```

impute_mean

Impute the mean value into a vector with missing values

Description

Impute the mean value into a vector with missing values

Usage

```
impute_mean(x)

## Default S3 method:
impute_mean(x)

## S3 method for class 'factor'
impute_mean(x)
```

Arguments

x vector

Value

vector with mean values replaced

impute_median

Examples

```
vec <- rnorm(10)
vec[sample(1:10, 3)] <- NA
impute_mean(vec)</pre>
```

impute_median

Impute the median value into a vector with missing values

Description

Impute the median value into a vector with missing values

Usage

```
impute_median(x)

## Default S3 method:
impute_median(x)

## S3 method for class 'factor'
impute_median(x)
```

Arguments

x vector

Value

vector with median values replaced

```
vec <- rnorm(10)
vec[sample(1:10, 3)] <- NA
impute_median(vec)</pre>
```

is_shade 37

is_shade

Detect if this is a shade

Description

This tells us if this column is a shade

Usage

```
is_shade(x)
are_shade(x)
any_shade(x)
```

Arguments

Х

a vector you want to test if is a shade

Value

```
logical - is this a shade?
```

```
xs <- shade(c(NA, 1, 2, "3"))
is_shade(xs)
are_shade(xs)
any_shade(xs)
aq_s <- as_shadow(airquality)
is_shade(aq_s)
are_shade(aq_s)
any_shade(aq_s)
any_shade(airquality)</pre>
```

38 label_missings

Description

Creates a character vector describing presence/absence of missing values

Usage

```
label_missings(data, ..., missing = "Missing", complete = "Not Missing")
```

Arguments

data a dataframe or set of vectors of the same length ... extra variable to label

missing character a label for when values are missing - defaults to "Missing"

complete character character a label for when values are complete - defaults to "Not Miss-

ing"

Value

character vector of "Missing" and "Not Missing".

See Also

```
bind_shadow() add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster()
add_n_miss() add_prop_miss() add_shadow_shift() cast_shadow()
```

label_miss_1d 39

label_miss_1d

Label a missing from one column

Description

Label whether a value is missing in a row of one columns.

Usage

```
label_miss_1d(x1)
```

Arguments

х1

a variable of a dataframe

Value

a vector indicating whether any of these rows had missing values

Note

can we generalise label_miss to work for any number of variables?

See Also

```
add_any_miss() add_label_missings() add_label_shadow()
```

Examples

```
label_miss_1d(airquality$0zone)
```

label_miss_2d

label_miss_2d

Description

Label whether a value is missing in either row of two columns.

Usage

```
label_miss_2d(x1, x2)
```

40 label_shadow

Arguments

x1 a variable of a dataframe

x2 another variable of a dataframe

Value

a vector indicating whether any of these rows had missing values

Examples

```
label_miss_2d(airquality$Ozone, airquality$Solar.R)
```

label_shadow

Label shadow values as missing or not missing

Description

Powers add_label_shadow. For the moment it is an internal function.

Usage

```
label_shadow(data, ..., missing = "Missing", complete = "Not Missing")
```

Arguments

data data.frame

... extra variable to label

missing character a label for when values are missing - defaults to "Missing"

complete character character a label for when values are complete - defaults to "Not Miss-

ing"

Value

"Missing" or "Not Missing"

mcar_test 41

mcar_test

Little's missing completely at random (MCAR) test

Description

Use Little's (1988) test statistic to assess if data is missing completely at random (MCAR). The null hypothesis in this test is that the data is MCAR, and the test statistic is a chi-squared value. The example below shows the output of mcar_test(airquality). Given the high statistic value and low p-value, we can conclude the airquality data is not missing completely at random.

Usage

```
mcar_test(data)
```

Arguments

data A data frame

Value

A tibble::tibble() with one row and four columns:

statistic Chi-squared statistic for Little's test

df Degrees of freedom used for chi-squared statistic

p. value P-value for the chi-squared statistic

missing.patterns

Number of missing data patterns in the data

Note

Code is adapted from LittleMCAR() in the now-orphaned BaylorEdPsych package: https://rdrr.io/cran/BaylorEdPsych/man/I Some of code is adapted from Eric Stemmler - https://web.archive.org/web/20201120030409/https://stats-bayes.com/post/2020/08/14/r-function-for-little-s-test-for-data-missing-completely-ausing Maximum likelihood estimation from norm.

mcar_test(oceanbuoys)

# If there are non-numeric columns, there will be a warning
mcar_test(riskfactors)
```

miss-pct-prop-defunct Proportion of variables containing missings or complete values

Description

```
Defunct. Please see prop_miss_var(), prop_complete_var(), pct_miss_var(), pct_complete_var(), prop_miss_case(), prop_complete_case(), pct_miss_case(), pct_complete_case().
```

Usage

```
miss_var_prop(...)
complete_var_prop(...)
miss_var_pct(...)
complete_var_pct(...)
miss_case_prop(...)
complete_case_prop(...)
miss_case_pct(...)
```

Arguments

... arguments

miss_case_cumsum 43

miss_case_cumsum

Summarise the missingness in each case

Description

Provide a data.frame containing each case (row), the number and percent of missing values in each case.

Usage

```
miss_case_cumsum(data)
```

Arguments

data

a dataframe

Value

a tibble containing the number and percent of missing data in each case

Examples

```
miss_case_cumsum(airquality)
## Not run:
library(dplyr)
airquality %>%
   group_by(Month) %>%
   miss_case_cumsum()
## End(Not run)
```

miss_case_summary

Summarise the missingness in each case

Description

Provide a summary for each case in the data of the number, percent missings, and cumulative sum of missings of the order of the variables. By default, it orders by the most missings in each variable.

Usage

```
miss_case_summary(data, order = TRUE, add_cumsum = FALSE, ...)
```

44 miss_case_table

Arguments

data a data.frame

order a logical indicating whether or not to order the result by n_miss. Defaults to

TRUE. If FALSE, order of cases is the order input.

add_cumsum logical indicating whether or not to add the cumulative sum of missings to the

data. This can be useful when exploring patterns of nonresponse. These are calculated as the cumulative sum of the missings in the variables as they are first

presented to the function.

... extra arguments

Value

a tibble of the percent of missing data in each case.

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
miss_case_summary(airquality)

## Not run:
# works with group_by from dplyr
library(dplyr)
airquality %>%
  group_by(Month) %>%
  miss_case_summary()

## End(Not run)
```

miss_case_table

Tabulate missings in cases.

Description

Provide a tidy table of the number of cases with 0, 1, 2, up to n, missing values and the proportion of the number of cases those cases make up.

Usage

```
miss_case_table(data)
```

miss_prop_summary 45

Arguments

data

a dataframe

Value

a dataframe

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
miss_case_table(airquality)
## Not run:
library(dplyr)
airquality %>%
  group_by(Month) %>%
  miss_case_table()
## End(Not run)
```

miss_prop_summary

Proportions of missings in data, variables, and cases.

Description

Return missing data info about the dataframe, the variables, and the cases. Specifically, returning how many elements in a dataframe contain a missing value, how many elements in a variable contain a missing value, and how many elements in a case contain a missing.

Usage

```
miss_prop_summary(data)
```

Arguments

data

a dataframe

Value

a dataframe

46 miss_scan_count

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

Examples

```
miss_prop_summary(airquality)
## Not run:
library(dplyr)
# respects dplyr::group_by
airquality %>% group_by(Month) %>% miss_prop_summary()
## End(Not run)
```

miss_scan_count

Search and present different kinds of missing values

Description

Searching for different kinds of missing values is really annoying. If you have values like -99 in your data, when they shouldn't be there, or they should be encoded as missing, it can be difficult to ascertain if they are there, and if so, where they are. miss_scan_count makes it easier for users to search for particular occurrences of these values across their variables.

Usage

```
miss_scan_count(data, search)
```

Arguments

data data

search values to search for

Value

a dataframe of the occurrences of the values you searched for

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

miss_summary 47

Examples

miss_summary

Collate summary measures from naniar into one tibble

Description

miss_summary performs all of the missing data helper summaries and puts them into lists within a tibble

Usage

```
miss_summary(data, order = TRUE)
```

Arguments

data a dataframe

order whether or not to order the result by n_miss

Value

a tibble of missing data summaries

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

48 miss_var_cumsum

Examples

```
s_miss <- miss_summary(airquality)
s_miss$miss_df_prop
s_miss$miss_case_table
s_miss$miss_var_summary
# etc, etc, etc.

## Not run:
library(dplyr)
s_miss_group <- group_by(airquality, Month) %>% miss_summary()
s_miss_group$miss_df_prop
s_miss_group$miss_case_table
# etc, etc, etc.

## End(Not run)
```

miss_var_cumsum

Cumulative sum of the number of missings in each variable

Description

Calculate the cumulative sum of number & percentage of missingness for each variable.

Usage

```
miss_var_cumsum(data)
```

Arguments

data

a data.frame

Value

a tibble of the cumulative sum of missing data in each variable

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

miss_var_run 49

Examples

```
miss_var_cumsum(airquality)
## Not run:
library(dplyr)

# respects dplyr::group_by
airquality %>%
   group_by(Month) %>%
   miss_var_cumsum()

## End(Not run)
```

miss_var_run

Find the number of missing and complete values in a single run

Description

It us useful to find the number of missing values that occur in a single run. The function, miss_var_run(), returns a dataframe with the column names "run_length" and "is_na", which describe the length of the run, and whether that run describes a missing value.

Usage

```
miss_var_run(data, var)
```

Arguments

data data.frame

var a bare variable name

Value

dataframe with column names "run_length" and "is_na", which describe the length of the run, and whether that run describes a missing value.

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

50 miss_var_span

Examples

```
miss_var_run(pedestrian, hourly_counts)
## Not run:
# find the number of runs missing/complete for each month
library(dplyr)
pedestrian %>%
  group_by(month) %>%
  miss_var_run(hourly_counts)
library(ggplot2)
# explore the number of missings in a given run
miss_var_run(pedestrian, hourly_counts) %>%
  filter(is_na == "missing") %>%
  count(run_length) %>%
  ggplot(aes(x = run_length,
             y = n)) +
      geom_col()
# look at the number of missing values and the run length of these.
miss_var_run(pedestrian, hourly_counts) %>%
  ggplot(aes(x = is_na,
             y = run_{length}) +
      geom_boxplot()
# using group_by
 pedestrian %>%
   group_by(month) %>%
   miss_var_run(hourly_counts)
## End(Not run)
```

miss_var_span

Summarise the number of missings for a given repeating span on a variable

Description

To summarise the missing values in a time series object it can be useful to calculate the number of missing values in a given time period. miss_var_span takes a data.frame object, a variable, and a span_every argument and returns a dataframe containing the number of missing values within each span. When the number of observations isn't a perfect multiple of the span length, the final span is whatever the last remainder is. For example, the pedestrian dataset has 37,700 rows. If the span is set to 4000, then there will be 1700 rows remaining. This can be provided using modulo (%%): nrow(data) %% 4000. This remainder number is provided in n_in_span.

miss_var_summary 51

Usage

```
miss_var_span(data, var, span_every)
```

Arguments

data data.frame

var bare unquoted variable name of interest.

span_every integer describing the length of the span to be explored

Value

dataframe with variables n_miss, n_complete, prop_miss, and prop_complete, which describe the number, or proportion of missing or complete values within that given time span. The final variable, n_in_span states how many observations are in the span.

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

Examples

miss_var_summary

Summarise the missingness in each variable

Description

Provide a summary for each variable of the number, percent missings, and cumulative sum of missings of the order of the variables. By default, it orders by the most missings in each variable.

52 miss_var_summary

Usage

```
miss_var_summary(data, order = FALSE, add_cumsum = FALSE, ...)
```

Arguments

data a data.frame

order a logical indicating whether to order the result by n_miss. Defaults to TRUE. If

FALSE, order of variables is the order input.

add_cumsum logical indicating whether or not to add the cumulative sum of missings to the

data. This can be useful when exploring patterns of nonresponse. These are calculated as the cumulative sum of the missings in the variables as they are first

presented to the function.

... extra arguments

Value

a tibble of the percent of missing data in each variable

Note

n_miss_cumsum is calculated as the cumulative sum of missings in the variables in the order that they are given in the data when entering the function

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

```
miss_var_summary(airquality)
miss_var_summary(oceanbuoys, order = TRUE)

## Not run:
# works with group_by from dplyr
library(dplyr)
airquality %>%
  group_by(Month) %>%
  miss_var_summary()

## End(Not run)
```

miss_var_table 53

miss_var_table

Tabulate the missings in the variables

Description

Provide a tidy table of the number of variables with 0, 1, 2, up to n, missing values and the proportion of the number of variables those variables make up.

Usage

```
miss_var_table(data)
```

Arguments

data

a dataframe

Value

a dataframe

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

```
miss_var_table(airquality)
## Not run:
library(dplyr)
airquality %>%
  group_by(Month) %>%
  miss_var_table()
## End(Not run)
```

54 n-var-case-complete

miss_var_which

Which variables contain missing values?

Description

It can be helpful when writing other functions to just return the names of the variables that contain missing values. miss_var_which returns a vector of variable names that contain missings. It will return NULL when there are no missings.

Usage

```
miss_var_which(data)
```

Arguments

data

a data.frame

Value

character vector of variable names

Examples

```
miss_var_which(airquality)
miss_var_which(mtcars)
```

n-var-case-complete

The number of variables with complete values

Description

This function calculates the number of variables that contain a complete value

Usage

```
n_var_complete(data)
n_case_complete(data)
```

Arguments

data

data.frame

n-var-case-miss 55

Value

integer number of complete values

See Also

```
n_var_miss()
```

Examples

```
# how many variables contain complete values?
n_var_complete(airquality)
n_case_complete(airquality)
```

n-var-case-miss

The number of variables or cases with missing values

Description

This function calculates the number of variables or cases that contain a missing value

Usage

```
n_var_miss(data)
n_case_miss(data)
```

Arguments

data

data.frame

Value

integer, number of missings

See Also

```
n_var_complete()
```

```
# how many variables contain missing values?
n_var_miss(airquality)
n_case_miss(airquality)
```

56 nabular

Description

Binding a shadow matrix to a regular dataframe converts it into nabular data, which makes it easier to visualise and work with missing data.

Usage

```
nabular(data, only_miss = FALSE, ...)
```

Arguments

data	a dataframe
only_miss	logical - if FALSE (default) it will bind a dataframe with all of the variables duplicated with their shadow. Setting this to TRUE will bind variables only those variables that contain missing values. See the examples for more details.
	extra options to pass to recode_shadow() - a work in progress.

Value

data with the added variable shifted and the suffix _NA

See Also

```
bind_shadow()
```

```
aq_nab <- nabular(airquality)
aq_s <- bind_shadow(airquality)
all.equal(aq_nab, aq_s)</pre>
```

naniar 57

naniar naniar

Description

naniar is a package to make it easier to summarise and handle missing values in R. It strives to do this in a way that is as consistent with tidyverse principles as possible.

See Also

```
add_any_miss() add_label_missings() add_label_shadow() add_miss_cluster() add_n_miss()

replace_with_na_at() replace_with_na_if() shadow_shift() stat_miss_point() vis_miss()
where_na()
```

new_shade

Create a new shade factor

Description

Create a new shade factor

Usage

```
new_shade(x, extra_levels = NULL)
```

Arguments

x a factor to convert into a shade object extra_levels the extra levels to give to shade objects, such as "broken_machine" and so on,

which get converted into "NA_broken_machine".

Value

a new shade, which is built upon a factor

58 n_complete_row

n_complete

Return the number of complete values

Description

A complement to n_miss

Usage

```
n_complete(x)
```

Arguments

Χ

a vector

Value

numeric number of complete values

Examples

```
n_complete(airquality)
n_complete(airquality$0zone)
```

n_complete_row

Return a vector of the number of complete values in each row

Description

Substitute for rowSums(!is.na(data)) but it also checks if input is NULL or is a dataframe

Usage

```
n_complete_row(data)
```

Arguments

data

a dataframe

Value

numeric vector of the number of complete values in each row

n_miss 59

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
n_complete_row(airquality)
```

n_miss

Return the number of missing values

Description

```
Substitute for sum(is.na(data))
```

Usage

```
n_{miss}(x)
```

Arguments

Χ

a vector

Value

numeric the number of missing values

```
n_miss(airquality)
n_miss(airquality$0zone)
```

60 oceanbuoys

n_miss_row

Return a vector of the number of missing values in each row

Description

Substitute for rowSums(is.na(data)), but it also checks if input is NULL or is a dataframe

Usage

```
n_miss_row(data)
```

Arguments

data

a dataframe

Value

numeric vector of the number of missing values in each row

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
n_miss_row(airquality)
```

oceanbuoys

West Pacific Tropical Atmosphere Ocean Data, 1993 & 1997.

Description

Real-time data from moored ocean buoys for improved detection, understanding and prediction of El Ni'o and La Ni'a. The data is collected by the Tropical Atmosphere Ocean project (https://www.pmel.noaa.gov/gtmba/pmel-theme/pacific-ocean-tao).

Usage

```
data(oceanbuoys)
```

oceanbuoys 61

Format

An object of class tbl_df (inherits from tbl, data.frame) with 736 rows and 8 columns.

Details

Format: a data frame with 736 observations on the following 8 variables.

year A numeric with levels 1993 1997.

latitude A numeric with levels -5 -2 0.

longitude A numeric with levels -110 -95.

sea_temp_c Sea surface temperature(degree Celsius), measured by the TAO buoys at one meter below the surface.

air_temp_c Air temperature(degree Celsius), measured by the TAO buoys three meters above the sea surface.

humidity Relative humidity(%), measured by the TAO buoys 3 meters above the sea surface.

- wind_ew The East-West wind vector components(M/s). TAO buoys measure the wind speed and direction four meters above the sea surface. If it is positive, the East-West component of the wind is blowing towards the East. If it is negative, this component is blowing towards the West.
- wind_ns The North-South wind vector components(M/s). TAO buoys measure the wind speed and direction four meters above the sea surface. If it is positive, the North-South component of the wind is blowing towards the North. If it is negative, this component is blowing towards the South.

```

See Also

library(MissingDataGUI) (data named "tao")

```
# for each year?
p + facet_wrap(~year)

# this shows that there are more missing values in humidity in 1993, and
# more air temperature missing values in 1997

# see more examples in the vignette, "getting started with naniar".

## End(Not run)

pct-miss-complete-case

Percentage of cases that contain a missing or complete values.
```

Description

Calculate the percentage of cases (rows) that contain a missing or complete value.

Usage

```
pct_miss_case(data)
pct_complete_case(data)
```

Arguments

data a dataframe

Value

numeric the percentage of cases that contain a missing or complete value

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

```
pct_miss_case(airquality)
pct_complete_case(airquality)
```

pct-miss-complete-var 63

pct-miss-complete-var Percentage of variables containing missings or complete values

Description

Calculate the percentage of variables that contain a single missing or complete value.

Usage

```
pct_miss_var(data)
pct_complete_var(data)
```

Arguments

data

a dataframe

Value

numeric the percent of variables that contain missing or complete data

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

Examples

```
prop_miss_var(airquality)
prop_complete_var(airquality)
```

pct_complete

Return the percent of complete values

Description

The complement to pct_miss

Usage

```
pct_complete(x)
```

pct_miss

Arguments

x vector or data.frame

Value

numeric percent of complete values

Examples

```
pct_complete(airquality)
pct_complete(airquality$0zone)
```

pct_miss

Return the percent of missing values

Description

This is shorthand for mean(is.na(x)) * 100

Usage

```
pct_miss(x)
```

Arguments

Х

vector or data.frame

Value

numeric the percent of missing values in x

```
pct_miss(airquality)
pct_miss(airquality$0zone)
```

pedestrian 65

pedestrian

Pedestrian count information around Melbourne for 2016

Description

This dataset contains hourly counts of pedestrians from 4 sensors around Melbourne: Birrarung Marr, Bourke Street Mall, Flagstaff station, and Spencer St-Collins St (south), recorded from January 1st 2016 at 00:00:00 to December 31st 2016 at 23:00:00. The data is made free and publicly available from https://data.melbourne.vic.gov.au/Transport-Movement/Pedestrian-volume-updated-monthly-b2ak-trbp

Usage

```
data(pedestrian)
```

Format

A tibble with 37,700 rows and 9 variables:

```
hourly_counts (integer) the number of pedestrians counted at that sensor at that time date_time (POSIXct, POSIXt) The time that the count was taken year (integer) Year of record month (factor) Month of record as an ordered factor (1 = January, 12 = December) month_day (integer) Full day of the month week_day (factor) Full day of the week as an ordered factor (1 = Sunday, 7 = Saturday) hour (integer) The hour of the day in 24 hour format sensor_id (integer) the id of the sensor sensor_name (character) the full name of the sensor
```

Source

```
https://data.melbourne.vic.gov.au/Transport-Movement/Pedestrian-volume-updated-monthly-/b2ak-trbp
```

```
# explore the missingness with vis_miss
vis_miss(pedestrian)
# Look at the missingness in the variables
miss_var_summary(pedestrian)
## Not run:
# There is only missingness in hourly_counts
# Look at the missingness over a rolling window
```

```
library(ggplot2)
gg_miss_span(pedestrian, hourly_counts, span_every = 3000)
## End(Not run)
```

plotly_helpers

Plotly helpers (Convert a geom to a "basic" geom.)

Description

Helper functions to make it easier to automatically create plotly charts. This function makes it possible to convert ggplot2 geoms that are not included with ggplot2 itself. Users shouldn't need to use this function. It exists purely to allow other package authors to write their own conversion method(s).

Usage

```
to_basic.GeomMissPoint(data, prestats_data, layout, params, p, ...)
```

Arguments

data the data returned by ggplot2::ggplot_build().

prestats_data the data before statistics are computed.

layout the panel layout.

params parameters for the geom, statistic, and 'constant' aesthetics

p a ggplot2 object (the conversion may depend on scales, for instance).

... currently ignored

```
prop-miss-complete-case
```

Proportion of cases that contain a missing or complete values.

Description

Calculate the proportion of cases (rows) that contain missing or complete values.

Usage

```
prop_miss_case(data)
prop_complete_case(data)
```

Arguments

data a dataframe

Value

numeric the proportion of cases that contain a missing or complete value

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

Examples

```
prop_miss_case(airquality)
prop_complete_case(airquality)
```

```
prop-miss-complete-var
```

Proportion of variables containing missings or complete values

Description

Calculate the proportion of variables that contain a single missing or complete values.

Usage

```
prop_miss_var(data)
prop_complete_var(data)
```

Arguments

data

a dataframe

Value

numeric the proportion of variables that contain missing or complete data

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table()
```

68 prop_complete_row

Examples

```
prop_miss_var(airquality)
prop_complete_var(airquality)
```

prop_complete

Return the proportion of complete values

Description

The complement to prop_miss

Usage

```
prop_complete(x)
```

Arguments

Х

vector or data.frame

Value

numeric proportion of complete values

Examples

```
prop_complete(airquality)
prop_complete(airquality$Ozone)
```

prop_complete_row

Return a vector of the proportion of missing values in each row

Description

Substitute for rowMeans(!is.na(data)), but it also checks if input is NULL or is a dataframe

Usage

```
prop_complete_row(data)
```

Arguments

data

a dataframe

prop_miss 69

Value

numeric vector of the proportion of missing values in each row

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
prop_complete_row(airquality)
```

prop_miss

Return the proportion of missing values

Description

This is shorthand for mean(is.na(x))

Usage

```
prop_miss(x)
```

Arguments

Х

vector or data.frame

Value

numeric the proportion of missing values in x

```
prop_miss(airquality)
prop_miss(airquality$0zone)
```

70 recode_shadow

prop_miss_row

Return a vector of the proportion of missing values in each row

Description

Substitute for rowMeans(is.na(data)), but it also checks if input is NULL or is a dataframe

Usage

```
prop_miss_row(data)
```

Arguments

data

a dataframe

Value

numeric vector of the proportion of missing values in each row

See Also

```
pct_miss_case() prop_miss_case() pct_miss_var() prop_miss_var() pct_complete_case()
prop_complete_case() pct_complete_var() prop_complete_var() miss_prop_summary() miss_case_summary()
miss_case_table() miss_summary() miss_var_prop() miss_var_run() miss_var_span() miss_var_summary()
miss_var_table() n_complete() n_complete_row() n_miss() n_miss_row() pct_complete()
pct_miss() prop_complete() prop_complete_row() prop_miss()
```

Examples

```
prop_miss_row(airquality)
```

recode_shadow

Add special missing values to the shadow matrix

Description

It can be useful to add special missing values, naniar supports this with the recode_shadow function.

Usage

```
recode_shadow(data, ...)
```

replace_to_na 71

Arguments

data data.frame

... A sequence of two-sided formulas as in dplyr::case_when, but when a wrapper function .where written around it.

Value

a dataframe with altered shadows

Examples

replace_to_na

Replace values with missings

Description

This function is Defunct, please see replace_with_na().

Usage

```
replace_to_na(...)
```

Arguments

.. additional arguments for methods.

Value

values replaced by NA

72 replace_with_na

replace_with_na

Replace values with missings

Description

Specify variables and their values that you want to convert to missing values. This is a complement to tidyr::replace_na.

Usage

```
replace_with_na(data, replace = list(), ...)
```

Arguments

data A data.frame

replace A named list given the NA to replace values for each column

... additional arguments for methods. Currently unused

Value

Dataframe with values replaced by NA.

                          z = c(-101))
```

replace_with_na_all 73

replace_with_na_all

Replace all values with NA where a certain condition is met

Description

This function takes a dataframe and replaces all values that meet the condition specified as an NA value, following a special syntax.

Usage

```
replace_with_na_all(data, condition)
```

Arguments

data

A dataframe

condition

A condition required to be TRUE to set NA. Here, the condition is specified with a formula, following the syntax: ~.x {condition}. For example, writing ~.x < 20 would mean "where a variable value is less than 20, replace with NA".

```
dat_ms <- tibble::tribble(~x,</pre>
                               "A",
                                       -100,
                           1,
                                "N/A", -99,
                           NA, NA,
                                       -98,
                           -99, "E",
                                       -101,
                           -98, "F",
                                       -1)
dat_ms
#replace all instances of -99 with NA
replace_with_na_all(data = dat_ms,
                     condition = \sim .x == -99)
# replace all instances of -99 or -98, or "N/A" with NA
replace_with_na_all(dat_ms,
                     condition = ^{\sim}.x %in% c(-99, -98, "N/A"))
# replace all instances of common na strings
replace_with_na_all(dat_ms,
                     condition = ~.x %in% common_na_strings)
# where works with functions
replace_with_na_all(airquality, \sim sqrt(.x) < 5)
```

74 replace_with_na_at

replace_with_na_at

Replace specified variables with NA where a certain condition is met

Description

Replace specified variables with NA where a certain condition is met

Usage

```
replace_with_na_at(data, .vars, condition)
```

Arguments

data dataframe

. vars A character string of variables to replace with NA values

condition A condition required to be TRUE to set NA. Here, the condition is specified with

a formula, following the syntax: ~.x {condition}. For example, writing ~.x < 20 would mean "where a variable value is less than 20, replace with NA".

where a variable varie is less than 2

Value

a dataframe

```
dat_ms <- tibble::tribble(~x, ~y,</pre>
                                       ~z,
                               "A",
                                       -100,
                           1,
                               "N/A", -99,
                           3,
                           NA, NA,
                                       -98,
                           -99, "E",
                                       -101,
                           -98, "F",
                                       -1)
dat_ms
replace_with_na_at(data = dat_ms,
                 .vars = x,
                 condition = \sim .x == -99)
replace_with_na_at(data = dat_ms,
                 .vars = c("x", "z"),
                 condition = \sim .x == -99)
# replace using values in common_na_strings
replace_with_na_at(data = dat_ms,
                 .vars = c("x","z"),
                 condition = ~.x %in% common_na_strings)
```

replace_with_na_if 75

replace_with_na_if	Replace values with NA based on some condition, for variables that
	meet some predicate

Description

Replace values with NA based on some condition, for variables that meet some predicate

Usage

```
replace_with_na_if(data, .predicate, condition)
```

Arguments

data	Dataframe	
.predicate	A predicate function to be applied to the columns or a logical vector.	
	A condition required to be TRUE to set NA. Here, the condition is specified with a formula, following the syntax: ~.x {condition}. For example, writing ~.x < 20 would mean "where a variable value is less than 20, replace with NA".	

Value

Dataframe

```
dat_ms <- tibble::tribble(~x, ~y,</pre>
                               "A",
                                     -100,
                          1,
                               "N/A", -99,
                          3,
                          NA, NA,
                                      -98,
                          -99, "E",
                                      -101,
                          -98, "F",
                                      -1)
dat_ms
replace_with_na_if(data = dat_ms,
                 .predicate = is.character,
                 condition = ^{\sim}.x == ^{"N/A"})
replace_with_na_if(data = dat_ms,
                   .predicate = is.character,
                   condition = ~.x %in% common_na_strings)
replace_with_na(dat_ms,
              to_na = list(x = c(-99, -98),
                           y = c("N/A"),
                           z = c(-101))
```

76 riskfactors

riskfactors	The Behavioral Risk Factor Surveillance System (BRFSS) Survey Data, 2009.

Description

The data is a subset of the 2009 survey from BRFSS, an ongoing data collection program designed to measure behavioral risk factors for the adult population (18 years of age or older) living in households.

Usage

data(riskfactors)

Format

An object of class tbl_df (inherits from tbl, data.frame) with 245 rows and 34 columns.

Source

https://www.cdc.gov/brfss/annual_data/annual_2009.htm

See Also

the codebook: https://www.cdc.gov/brfss/annual_data/annual_2009.htm

Format: a data frame with 245 observations on the following 34 variables.

state A factor with 52 levels. The labels and states corresponding to the labels are as follows: 1:Alabama, 2:Alaska, 4:Arizona, 5:Arkansas, 6:California,8:Colorado, 9:Connecticut, 10:Delaware, 11:District of Columbia,12:Florida, 13:Georgia, 15:Hawaii, 16:Idaho, 1:Illinois,18:Indiana, 19:Iowa, 20:Kansas, 21:Kentucky, 22:Louisiana,23:Maine, 24:Maryland, 25:Massachusetts, 26:Michigan,27:Minnesota, 28:Mississippi, 2:Missouri, 30:Montana,31:Nebraska, 32:Nevada, 33:New Hampshire, 34:New Jersey, 35:NewMexico, 36:New York, 37:North Carolina, 38:North Dakota, 39:Ohio,40:Oklahoma, 41:Oregon, 42:Pennsylvania, 44:Rhode Island, 45:SouthCarolina, 46:South Dakota, 47:Tennessee, 48:Texas, 49:Utah, 50:Vermont, 51:Virginia, 53:Washington, 54:West Virginia,55:Wisconsin, 56:Wyoming, 66:Guam, 72:Puerto Rico, 78:Virgin Islands

sex A factor with levels Male Female.

age A numeric vector from 7 to 97.

weight_lbs The weight without shoes in pounds.

height_inch The weight without shoes in inches.

bmi Body Mass Index (BMI). Computed by weight in Kilogram /(height in Meters * height in Meters). Missing if any of weight or height is missing.

marital A factor with levels Married Divorced Widowed Separated NeverMarried UnmarriedCouple. pregnant Whether pregnant now with two levels Yes and No.

children A numeric vector giving the number of children less than 18 years of age in household.

riskfactors 77

education A factor with the education levels 1 2 3 4 5 6 as 1: Never attended school or only kindergarten; 2: Grades 1 through 8 (Elementary); 3: Grades 9 through 11 (Some high school); 4: Grade 12 or GED (High school graduate); 5: College 1 year to 3 years (Some college or technical school); 6: College 4 years or more (College graduate).

- employment A factor showing the employment status with levels 1 2 3 4 5 7 8. The labels mean 1: Employed for wages; 2: Self-employed; 3: Out of work for more than 1 year; 4: Out of work for less that 1 year; 5: A homemaker; 6: A student; 7:Retired; 8: Unable to work.
- income The annual household income from all sources with levels <10k 10-15k 15-20k 20-25k 25-35k 35-50k 50-75k >75k Dontknow Refused.
- veteran A factor with levels 1 2 3 4 5. The question for this variable is: Have you ever served on active duty in the United States Armed Forces, either in the regular military or in a National Guard or military reserve unit? Active duty does not include training for the Reserves or National Guard, but DOES include activation, for example, for the Persian Gulf War. And the labels are meaning: 1: Yes, now on active duty; 2: Yes, on active duty during the last 12 months, but not now; 3: Yes, on active duty in the past, but not during the last 12 months; 4: No, training for Reserves or National Guard only; 5: No, never served in the military.
- hispanic A factor with levels Yes No corresponding to the question: are you Hispanic or Latino?
- health_general Answer to question "in general your health is" with levels Excellent VeryGood Good Fair Poor Refused.
- health_physical The number of days during the last 30 days that the respondent's physical health was not good. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- health_mental The number of days during the last 30 days that the respondent's mental health was not good. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- health_poor The number of days during the last 30 days that poor physical or mental health keep the respondent from doing usual activities, such as self-care, work, or recreation. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- health_cover Whether having any kind of health care coverage, including health insurance, prepaid plans such as HMOs, or government plans such as Medicare. The answer has two levels: Yes and No.
- provide_care Whether providing any such care or assistance to a friend or family member during the past month, with levels Yes and No.
- activity_limited Whether being limited in any way in any activities because of physical, mental, or emotional problems, with levels Yes and No.
- drink_any Whether having had at least one drink of any alcoholic beverage such as beer, wine, a malt beverage or liquor during the past 30 days, with levels Yes and No.
- drink_days The number of days during the past 30 days that the respondent had at least one drink of any alcoholic beverage. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- drink_avg The number of drinks on the average the respondent had on the days when he/she drank, during the past 30 days. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- smoke_100 Whether having smoked at least 100 cigarettes in the entire life, with levels Yes and No.
- smoke_days The frequency of days now smoking, with levels Everyday Somedays and NotAtAll(not at all).

78 riskfactors

smoke_stop Whether having stopped smoking for one day or longer during the past 12 months because the respondent was trying to quit smoking, with levels Yes and No.

- smoke_last A factor with levels 3 4 5 6 7 8 corresponding to the question: how long has it been since last smoking cigarettes regularly? The labels mean: 3: Within the past 6 months (3 months but less than 6 months ago); 4: Within the past year (6 months but less than 1 year ago); 5: Within the past 5 years (1 year but less than 5 years ago); 6: Within the past 10 years (5 years but less than 10 years ago); 7: 10 years or more; 8: Never smoked regularly.
- diet_fruit The number of fruit the respondent eat every year, not counting juice. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- diet_salad The number of servings of green salad the respondent eat every year. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- diet_potato The number of servings of potatoes, not including french fries, fried potatoes, or potato chips, that the respondent eat every year. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- diet_carrot The number of carrots the respondent eat every year. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- diet_vegetable The number of servings of vegetables the respondent eat every year, not counting carrots, potatoes, or salad. -7 is for "Don't know/Not sure", and -9 is for "Refused".
- diet_juice The number of fruit juices such as orange, grapefruit, or tomato that the respondent drink every year. -7 is for "Don't know/Not sure", and -9 is for "Refused".

library(MissingDataGUI) (named brfss)

```
vis_miss(riskfactors)
# Look at the missingness in the variables
miss_var_summary(riskfactors)
# and now as a plot
gg_miss_var(riskfactors)
## Not run:
# Look at the missingness in bmi and poor health
library(ggplot2)
p <-
ggplot(riskfactors,
       aes(x = health_poor,
           y = bmi)) +
     geom_miss_point()
 p
 # for each sex?
 p + facet_wrap(~sex)
 # for each education bracket?
 p + facet_wrap(~education)
```

scoped-impute_mean 79

```
## End(Not run)
```

scoped-impute_mean
Scoped variants of impute_mean

Description

impute_mean imputes the mean for a vector. To get it to work on all variables, use impute_mean_all. To only impute variables that satisfy a specific condition, use the scoped variants, impute_below_at, and impute_below_if. To use _at effectively, you must know that _at`` affects variables selected with a character vector, or with vars()'.

Usage

```
impute_mean_all(.tbl)
impute_mean_at(.tbl, .vars)
impute_mean_if(.tbl, .predicate)
```

Arguments

.tbl a data.frame.vars variables to impute.predicate variables to impute

Value

an dataset with values imputed

scoped-impute_median Scoped variants of impute_median

Description

impute_median imputes the median for a vector. To get it to work on all variables, use impute_median_all. To only impute variables that satisfy a specific condition, use the scoped variants, impute_below_at, and impute_below_if. To use _at effectively, you must know that _at`` affects variables selected with a character vector, or with vars()'.

Usage

```
impute_median_all(.tbl)
impute_median_at(.tbl, .vars)
impute_median_if(.tbl, .predicate)
```

Arguments

.tbl a data.frame.vars variables to impute.predicate variables to impute

Value

an dataset with values imputed

shade 81

shade

Create new levels of missing

Description

Returns (at least) factors of !NA and NA, where !NA indicates a datum that is not missing, and NA indicates missingness. It also allows you to specify some new missings, if you like. This function is what powers the factor levels in as_shadow().

Usage

```
shade(x, ..., extra_levels = NULL)
```

Arguments

```
x a vector... additional levels of missing to addextra_levels extra levels you might to specify for the factor.
```

```
shade(df$wind, inst_fail = -99)
```

shadow_expand_relevel Expand and relevel a shadow column with a new suffix

Description

Internal function to handle appropriate expansion and releveling of shadow variables.

Usage

```
shadow_expand_relevel(.var, suffix)
```

Arguments

```
.var a variable in a data.framesuffix a character suffix to add to NA_, e.
```

Value

a factor with expanded levels

```
df <- tibble::tribble(</pre>
  ~wind, ~temp,
  -99,
          45,
  68,
         NA,
  72,
         25
)
dfs <- bind_shadow(df)</pre>
test_shade <- dfs$wind_NA</pre>
# shadow_expand_relevel(test_shade, "weee")
  dfs %>%
     mutate(temp_NA = shadow_expand_relevel(temp_NA, "weee"))
# test that this breaks
# shadow_expand_relevel(airquality, "weee")
```

shadow_long 83

shadow_long

Reshape shadow data into a long format

Description

Once data is in nabular form, where the shadow is bound to the data, it can be useful to reshape it into a long format with the columns

Usage

```
shadow_long(shadow_data, ..., only_main_vars = TRUE)
```

Arguments

```
shadow_data a data.frame
... bare name of variables that you want to focus on
only_main_vars logical - do you want to filter down to main variables?
```

Value

data in long format, with columns variable, value, variable_NA, and value_NA.

Examples

```
aq_shadow <- bind_shadow(airquality)
shadow_long(aq_shadow)
# then filter only on Ozone
shadow_long(aq_shadow, Ozone)
shadow_long(aq_shadow, Ozone, Solar.R)</pre>
```

 ${\sf shadow_shift}$

Shift missing values to facilitate missing data exploration/visualisation

Description

shadow_shift transforms missing values to facilitate visualisation, and has different behaviour for different types of variables. For numeric variables, the values are shifted to 10% below the minimum value for a given variable plus some jittered noise, to separate repeated values, so that missing values can be visualised along with the rest of the data.

Usage

```
shadow_shift(x, ...)
```

Arguments

x a variable of interest to shift... extra arguments to pass

See Also

```
add_shadow_shift() cast_shadow_shift() cast_shadow_shift_label()
```

Examples

```
airquality$0zone
shadow_shift(airquality$0zone)
## Not run:
library(dplyr)
airquality %>%
    mutate(Ozone_shift = shadow_shift(Ozone))
## End(Not run)
```

shadow_shift.numeric Shift (impute) numeric values for graphical exploration

Description

Shift (impute) numeric values for graphical exploration

Usage

```
## $3 method for class 'numeric'
shadow_shift(
    x,
    prop_below = 0.1,
    jitter = 0.05,
    seed_shift = 2017 - 7 - 1 - 1850,
    ...
)
```

Arguments

```
x a variable of interest to shift
prop_below the degree to shift the values. default is
jitter the amount of jitter to add. default is 0.05
seed_shift a random seed to set, if you like
... extra arguments to pass
```

stat_miss_point 85

stat_miss_point stat_miss_point

Description

stat_miss_point adds a geometry for displaying missingness to geom_point

Usage

```
stat_miss_point(
  mapping = NULL,
  data = NULL,
  prop_below = 0.1,
  jitter = 0.05,
  geom = "point",
  position = "identity",
  na.rm = FALSE,
  show.legend = NA,
  inherit.aes = TRUE,
  ...
)
```

Arguments

mapping	Set of aesthetic mappings created by ggplot2::aes() or ggplot2::aes_(). If specified and inherit.aes = TRUE (the default), is combined with the default mapping at the top level of the plot. You only need to supply mapping if there isn't a mapping defined for the plot.
data	A data frame. If specified, overrides the default data frame defined at the top level of the plot.
prop_below	the degree to shift the values. The default is 0.1
jitter	the amount of jitter to add. The default is 0.05
geom,	stat Override the default connection between geom_point and stat_point.
position	Position adjustment, either as a string, or the result of a call to a position adjustment function
na.rm	If FALSE (the default), removes missing values with a warning. If TRUE silently removes missing values.
show.legend	logical. Should this layer be included in the legends? NA, the default, includes if any aesthetics are mapped. FALSE never includes, and TRUE always includes.
inherit.aes	If FALSE, overrides the default aesthetics, rather than combining with them. This is most useful for helper functions that define both data and aesthetics and shouldn't inherit behaviour from the default plot specification, e.g. borders.
	other arguments passed on to $ggplot2::layer()$. There are three types of arguments you can use here:

86 test_if_dataframe

• Aesthetics: to set an aesthetic to a fixed value, like color = "red" or size = 3.

- Other arguments to the layer, for example you override the default stat associated with the layer.
- Other arguments passed on to the stat.

test_if_dataframe

Test if input is a data.frame

Description

Test if input is a data.frame

Usage

```
test_if_dataframe(x)
```

Arguments

Χ

object

Value

an error if input (x) is a data.frame

```
## Not run:
# success
test_if_dataframe(airquality)
#fail
my_test <- matrix(10)
test_if_dataframe(my_test)
## End(Not run)</pre>
```

test_if_missing 87

test_if_missing

Test if the input is Missing

Description

Test if the input is Missing

Usage

```
test_if_missing(x)
```

Arguments

Χ

object

Value

an error if input (x) is not specified

Examples

```
## Not run:
# success
my_test <- x
test_if_null(my_test)
#fail
test_if_missing()
## End(Not run)</pre>
```

test_if_null

Test if the input is NULL

Description

Test if the input is NULL

Usage

```
test_if_null(x)
```

Arguments

Х

object

88 unbinders

Value

```
an error if input (x) is NULL
```

Examples

```
## Not run:
# success
test_if_null(airquality)
#fail
my_test <- NULL
test_if_null(my_test)
## End(Not run)</pre>
```

unbinders

Unbind (remove) shadow from data, and vice versa

Description

Remove the shadow variables (which end in _NA) from the data, or vice versa. This will also remove the nabular class from the data.

Usage

```
unbind_shadow(data)
unbind_data(data)
```

Arguments

data

data.frame containing shadow columns (created by bind_shadow())

Value

data.frame without shadow columns if using unbind_shadow(), or without the original data, if using unbind_data().

```
# bind shadow columns
aq_sh <- bind_shadow(airquality)
# print data
aq_sh
# remove shadow columns

```

update_shadow 89

```
# remove data
unbind_data(aq_sh)

# errors when you don't use data with shadows
## Not run:
   unbind_data(airquality)
   unbind_shadow(airquality)

## End(Not run)
```

update_shadow

Expand all shadow levels

Description

Internal function to appropriately expand and relevel all shadow variables to include a new suffix

Usage

```
update_shadow(data, suffix)
```

Arguments

data data.frame suffix character vector

Value

data.frame with adjusted levels

90 where

what_levels

check the levels of many things

Description

this function is used internally to check what the levels are of the dataframe.

Usage

```
what_levels(x)
```

Arguments

Χ

data.frame, usually

Value

a list containing the levels of everything

where

Split a call into two components with a useful verb name

Description

This function is used inside recode_shadow to help evaluate the formula call effectively. .where is a special function designed for use in recode_shadow, and you shouldn't use it outside of it

Usage

```
.where(...)
```

Arguments

```
... case_when style formula
```

Value

```
a list of "condition" and "suffix" arguments
```

where_na 91

Examples

where_na

Which rows and cols contain missings?

Description

Internal function that is short for which(is.na(x), arr.ind = TRUE). Creates array index locations of missing values in a dataframe.

Usage

```
where_na(x)
```

Arguments

Χ

a dataframe

Value

a matrix with columns "row" and "col", which refer to the row and column that identify the position of a missing value in a dataframe

See Also

```
which_na()
```

```
where_na(airquality)
where_na(oceanbuoys$sea_temp_c)
```

92 which_na

which_are_shade

Which variables are shades?

Description

This function tells us which variables contain shade information

Usage

```
which_are_shade(.tbl)
```

Arguments

.tbl

a data.frame or tbl

Value

numeric - which column numbers contain shade information

Examples

```
df_shadow <- bind_shadow(airquality)
which_are_shade(df_shadow)</pre>
```

which_na

Which elements contain missings?

Description

Equivalent to which(is.na()) - returns integer locations of missing values.

Usage

```
which_na(x)
```

Arguments

Х

a dataframe

Value

integer locations of missing values.

which_na 93

See Also

where_na()

Examples

which_na(airquality)
